PROFESSIONAL SUMMARY

Full Stack Software Engineer with **5+ years** of experience shipping production web applications for a B2B SaaS platform serving **800+ active clients** and **6,000+ users**. Proven track record of owning features end-to-end, from data modeling and UI to AI service integrations (AWS Textract) and fiscal process automation. Strong backend expertise in queue-driven, asynchronous systems with **NestJS**, **PostgreSQL** and **RabbitMQ**, focused on idempotency, retry strategies and fault tolerance. Experienced with Docker, CI/CD and cloud infrastructure (AWS, GCP). Advanced English (C1).

WORK EXPERIENCE

Web Developer

Apr. 2021 – Present

Wonder Sistemas | B2B SaaS Platform

Erechim, Brazil

- **Architected and shipped the expense management module end-to-end** on the core platform, from data modeling and interface design to third-party integrations, starting from an empty directory and currently used by dozens of enterprise clients.
- Built an **AWS Textract** integration for OCR-based invoice reading and a scraper that extracts data from electronic invoices on the Brazilian tax authority portal via QR code, eliminating manual form entry; made targeted changes to the **Ruby on Rails** backend to support the flow.
- Deliver and maintain production features using **React**, **TypeScript** and **GraphQL**, following agile practices, code review and containerized deployments with **Docker**.
- Co-built and maintain a reusable React component library documented via JSDoc, standardizing UI patterns and accelerating feature delivery across a team of 6 developers.
- Built test coverage for critical flows with unit and snapshot tests (**Vitest** and React Testing Library) to prevent regressions.

Chatbot Development Intern

Feb. 2021 – Apr. 2021

Compass UOL (Software House)

Erechim, Brazil (Remote)

- Built chatbots in **Node.js** integrating **IBM Watson Assistant** and the Blip platform, focused on conversational flow automation, external API integration and backend development.

PROJECTS

Async Webhook Ingestion Platform | *NestJS, PostgreSQL, RabbitMQ*

2026

- Built a B2B platform that receives order webhooks from marketplace partners and processes them asynchronously with idempotency and resiliency guarantees.
- Implemented a webhook receiver with **HMAC-SHA256 validation** and **event_id idempotency**, ensuring at-least-once delivery with idempotent processing.
- Used RabbitMQ to decouple reception from processing, returning sub-100ms responses to senders while background workers handle the actual processing, protecting partner SLAs from internal latency.
- Implemented fault tolerance via **exponential backoff retry** and **dead-letter queue** for non-recoverable events.
- Documented architecture decisions as ADRs in the [public GitHub repository](#).

Chess AI Engine with Minimax | *Python, Lichess Bot API*

2024

- **Undergraduate Thesis**: built a chess AI engine from scratch using **Minimax with Alpha-Beta Pruning**, integrated with the **Lichess Bot API** for real-time online matches against human players. Live at chess-matheusfinatto.netlify.app, code on [GitHub](#).

EDUCATION

Regional Integrated University of Upper Uruguay and the Missions (URI) <i>B.Sc. in Computer Science</i>	Erechim, Brazil 2021 – 2024
HarvardX edX <i>CS50x: Introduction to Computer Science</i>	Online 2021
Federal University of Santa Maria (UFSM) <i>B.Sc. in Business Administration</i>	Santa Maria, Brazil 2016 – 2019

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Front-End: React, Next.js, Redux, Context API, Tailwind CSS, SCSS, Styled Components, CSS Modules

Back-End: NestJS, Node.js, Express, REST, GraphQL

Databases: PostgreSQL, MongoDB (Mongoose), MySQL

Infra & DevOps: Docker, RabbitMQ, AWS (Textract, S3), GCP, Git, CI/CD (GitHub Actions, Vercel)

Testing: Vitest, React Testing Library

Spoken Languages: Portuguese (Native), English (Advanced, C1), Italian (Basic), Spanish (Basic)
