PROFESSIONAL SUMMARY

Software engineer with 5+ years building web applications for a B2B SaaS platform used by more than 800 companies and 6,000 users. Specialized in React, TypeScript, and GraphQL, driving front-end architecture decisions: typed contracts across repositories, a multi-layer testing strategy, and modernization of legacy codebases. Back-end work in Node.js, NestJS, RabbitMQ, and PostgreSQL applied to distributed systems and asynchronous processing. Advanced English (C1).

PROFESSIONAL EXPERIENCE

Software Engineer

Apr. 2021 – Present

Wonder Sistemas | B2B SaaS Platform (800+ clients, 6,000+ users)

Erechim, Brazil

- Owned end-to-end development of the expense management module, from data model definition through production release, implementing dynamic forms, installment rules, card payments, and back-end integrations for a feature used by dozens of corporate clients.
- Proposed and implemented a GraphQL contract between the front-end and back-end repositories using GraphQL Code Generator, automating the detection of incompatibilities between the applications. The initiative surfaced 21 pre-existing broken queries, subsequently fixed.
- Investigated an intermittent production bug that had persisted for months, tracing the root cause to database session pool management. After the fix, validated the solution across 50 consecutive runs of the E2E suite, eliminating the observed failures and raising the success rate to 100%.
- Proposed and implemented a testing strategy spanning smoke tests, integration tests, GraphQL contract testing, and E2E tests, establishing the division of responsibilities adopted across front-end and back-end. Achieved 100% smoke coverage of application routes and replaced flaky tests with behavior-driven tests using Vitest, React Testing Library, and Playwright.
- Automated invoice data extraction using AI via AWS Textract, eliminating manual data entry from the expense submission process and reducing operational steps.
- Led the incremental migration of legacy modules from JavaScript to TypeScript, establishing the modernization standard adopted across the repository: converting class components to hooks and reducing Redux usage where native React features were sufficient.

Chatbot Development Intern

Feb. 2021 – Apr. 2021

Compass UOL (Software Consultancy)

Erechim, Brazil (Remote)

- Built chatbots in Node.js integrating IBM Watson Assistant and the Blip platform, focused on conversational flow automation and external API integration.

FEATURED FULLSTACK PROJECT

Distributed architecture, message queues, and asynchronous processing

Asynchronous Webhook Ingestion Platform | *NestJS, PostgreSQL, RabbitMQ, React* 2026

- Built a B2B webhook ingestion API in NestJS that receives external events and processes them asynchronously through a RabbitMQ-based architecture, enabling fast client responses and resilient background processing.
- Implemented event validation with HMAC-SHA256 and idempotency mechanisms, along with a resilient flow using retries and dead-letter queues, enabling failure recovery, error inspection, and safe reprocessing.
- Implemented observability with Prometheus metrics, Grafana dashboards, and structured logging, tracking the full execution lifecycle of every event.
- Validated architecture performance through reproducible benchmarks in a containerized environment via Docker Compose, reaching **p99 $\approx$ 65 ms** under 2,000 signed requests and 20 concurrent connections, with benchmarks running automatically in CI.
- Built a React interface for real-time visualization of the event lifecycle, covering successes, retries, failures, and messages sent to the dead-letter queue.

Source code available in the public repository; architectural decisions and project context in the portfolio.

EDUCATION

Universidade Regional Integrada do Alto Uruguai e das Missões (URI) Erechim, Brazil
B.Sc. in Computer Science 2021 – 2024

HarvardX | edX Online
CS50x: Introduction to Computer Science 2021

Universidade Federal de Santa Maria (UFSM) Santa Maria, Brazil
B.A. in Business Administration 2016 – 2019

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Front-End: React, Next.js, Vite, GraphQL, Redux, Tailwind, SCSS, Styled Components

Back-End: NestJS, Node.js, Express, REST, RabbitMQ

Databases: PostgreSQL, MongoDB (Mongoose), MySQL

Infrastructure & DevOps: Docker, AWS (Textract), Git/GitHub, CI/CD (GitHub Actions, Vercel)

Testing & Observability: Vitest, Jest, React Testing Library, Playwright, Testcontainers, Prometheus, Grafana
